GROWTHX MASTERCLASS · 90 MINUTES

Build your portfolio. Ship it live tonight.

A live build with Claude, GitHub, and Vercel.

Pratik Renuse

Growth Leader, Bueno

AGENDA

90 minutes.

7:00 — 7:10	Intro and theory	What you will build today · Why it matters · GitHub matters
7:10 — 7:45	Live build	Upload resume + LinkedIn + reference site · prompt Claude for a portfolio site
7:45 — 8:00	Demos	2–3 volunteers share screen · brief live feedback
8:00 — 8:30	Ship live + Q&A	GitHub repo · Vercel · Supabase bonus · open Q&A

TONIGHT YOU WALK OUT WITH

Three things

01

A live URL

02

A GitHub repo

03

A builder’s mindset

Whether you're at zero or building your fifth site, you leave further than you walked in.

WHY CLAUDE

No-code builds a website.

Claude builds your codebase.

01

Customisation

Feed Claude your story, your resume, your design taste. The output is yours, not a template.

02

Compounding

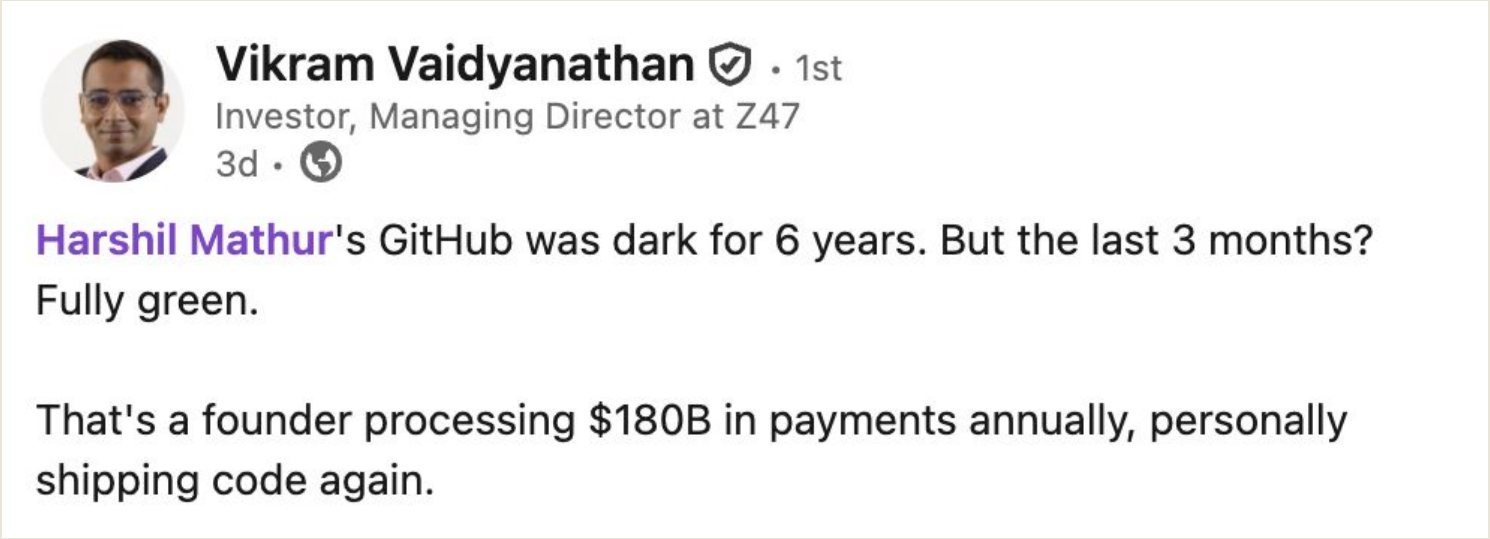

Every prompt teaches Claude more about you. Tomorrow's edits get sharper, not slower.

WHY GITHUB

A GitHub profile is a signal.

A green commit grid	*Signals you ship, not just talk.*
A public repo of your site	*Proof you can build, not just brief.*

A GitHub profile is a signal.

THE IMPORTANT TAKEAWAYS

Two Important Concepts. Takeaways.

ASK

Claude

Stuck somewhere? Ask Claude. It'll help you speed up.

CLUSTERS

Context

Give direction and reference examples

QUICK POLL

How many of you have a portfolio site right now?

A

Nothing yet

I've thought about it, never shipped.

B

A basic site live

On Webflow, Framer, Notion, or similar.

C

Custom-coded site

I own the source. I want to push further.

PART TWO

Live build in *Claude.*

30 minutes · Three steps

Claude.ai ready. Resume and LinkedIn export downloaded.

1

STEP 01

Feed Claude your context

Before any HTML, give it you.

Upload your LinkedIn export and resume. Write few sentences about what you want to be known for. Claude needs to understand the person before it can design for them.

2

STEP 02

Share your design references

Show, don't describe.

Pick three sites you genuinely admire. Paste the URLs. Tell Claude what you love about each one. Layout? Typography? Restraint? Specificity beats adjectives.

Bad: "make it modern". Good: "editorial like stripe.com, restrained like linear.app".

3

STEP 03

Iterate and sharpen

Refine in short cycles.

Change one thing at a time. Copy on the hero. Spacing in the projects section. The accent color. Each round teaches Claude your taste. Round five looks nothing like round one.

PART THREE

Show me *what you built.*

Share your screen. Walk us through your hero, your projects section, one design decision.

PART FOUR

Ship it *live.*

30 minutes · GitHub · Vercel · Real URL by the end

DEPLOY · STEP 1

Put your file on GitHub.

1. **Create a new repo** — Name it portfolio. Set it public.
2. **Upload index.html** — Drag the file Claude gave you straight into the repo.
3. **Commit with a message** — Anything is fine. The first one is the start of your green grid.

DEPLOY · STEP 2

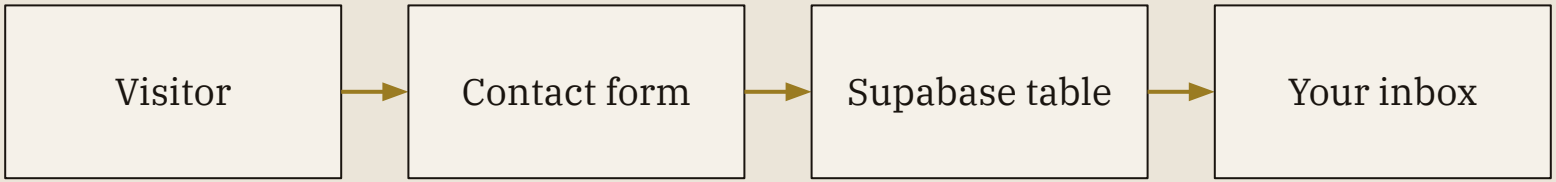

Connect Vercel. One click.

1. Sign in with GitHub
   Vercel imports your repos automatically. No copy-paste.
2. Pick your portfolio repo
   Click Deploy. Wait twelve seconds. That's the entire build step.
3. Get your live URL
   yourname.vercel.app is ready. Add a custom domain later for ten dollars a year.

BONUS LEVEL

Turn your portfolio into a lead engine.

Add a contact form. Wire it to Supabase. Every visitor becomes a row in a table you own.

Same stack. One extra step. A portfolio that earns you meetings while you sleep.

GO FURTHER

A portfolio nobody forgets.

Once the basic site is live, ask Claude for something only you would build.

— Bonus

Interactive hero

A canvas animation, a parallax scroll, a 3D object that follows the cursor. Set the tone in two seconds.

— Bonus

Mini game

A puzzle that reveals your bio. A typing test of your favorite quote. Visitors play, then read.

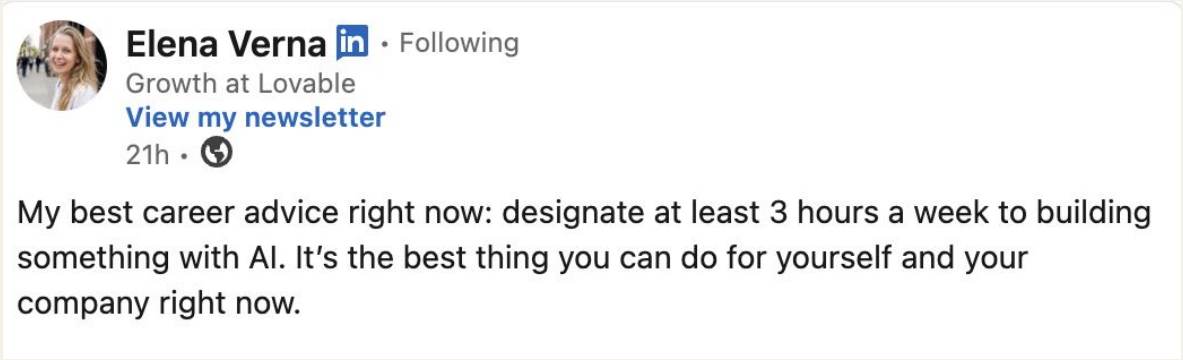

— Bonus

Live data widget

Pull from Spotify, GitHub, or your blog API. The site updates itself. Always fresh.

GO FURTHER

Build everyday.

Questions.

Ask anything. About the build. About the workflow. About what to build next week.

“The quiet mind builds what the busy one cannot.”
